

### **University Institute of Engineering**

## **Department of Computer Science & Engineering**

### **Experiment: 1**

Student Name: Ankush UID: 23BCS12742

Branch: Computer Science & Engineering Section/Group: KRG-3B

Semester: 5th Subject Code: 23CSP-339

Subject Name: ADBMS

### 1. Aim of the practical:

Author-Book Relationship Using Joins and Basic SQL Operations

1. Design two tables — one for storing author details and the other for book details.

- 2. Ensure a foreign key relationship from the book to its respective author.
- 3. Insert at least three records in each table.
- 4. Perform an INNER JOIN to link each book with its author using the common author ID.
- 5. Select the book title, author name, and author's country.

**Sample Output Description:** When the join is performed, we get a list where each book title is shown along with its s author's name and their country.

**2. Tool Used:** SQL Server Management Studio.

#### 3. CODE:

```
CREATE TABLE Authors (
author_id INT PRIMARY KEY,
name VARCHAR(100),
country VARCHAR(100)
);

CREATE TABLE Books (
book_id INT PRIMARY KEY,
title VARCHAR(150),
author_id INT,
    FOREIGN KEY (author_id) REFERENCES Authors(author_id));
INSERT INTO Authors (author_id, name, country) VALUES
(1, 'A', 'UK'),
(2, 'B', 'USA'),
(3, 'C', 'IND');
```

## **University Institute of Engineering**

# **Department of Computer Science & Engineering**

```
INSERT INTO Books (book_id, title, author_id) VALUES

(101, 'x', 1),
(102, 'Y', 2),
(103, 'Z', 3);

SELECT

B.title AS Book_Title,
A.name AS Author_Name,
A.country AS Author_Country

FROM
Books B

INNER JOIN
Authors A ON B.author_id = A.author_id;
```

### 4. LEARNING OUTCOMES:-

- Learn how to define and create relational database tables using CREATE TABLE syntax.
- Understand the use of data types like INT and VARCHAR.
- Gain practical knowledge of establishing a primary key for uniquely identifying records.
- Understand how to create and enforce foreign key relationships to maintain data integrity between related tables (Books → Authors).
- Develop the ability to use INNER JOIN to combine data from multiple tables based on a common key (e.g., author id).
